

RADIO HOLLAND

Service Agreements & Remote Monitoring

Stefan Zieseniß | Tobias Landwehr
Nautisch-Technischer Inspektoren-Kreis Hamburg e.V. - April 4, 2018

Agenda

- **Company introduction**
- **Service agreements**
- **Global vessel service database & Online Portal**
- **Remote Monitoring & Support**

SOLUTIONS

Navigation
Communication
Ship to Shore Comm.
On Board ICT
Service & Maintenance

MARKET SEGMENTS

Cargo
Oil & Gas
Yachts
Tug & Workboats
Cruise
Naval
Inland

Wherever you are – We are always near!

Scope of Supply – RH Germany

- Navigation & communication specialist
- Installation & retrofit experts
- Maintenance Contracts
- 24/7 service & support
- Radio, navigational & (S)VDR class survey
- Retrofit solutions
- Remote monitoring & diagnostics

Service Quality as a standard

We are tracking our services world wide and we are proud to have experts all over the world

- Certified Technicians
- State of the Art Installation & Services
- First Time Right Rate: >95 %

Radio Holland solutions

➤ Customer needs

- Managed cost of ownership
- Uninterrupted schedule
- Hassle free compliance

➤ Radio Holland solutions

- Service Agreements
- Global vessel service database & Online portal
- Remote Monitoring & Support

Why service agreements?

"Everything looks OK from here Captain"

Why service agreements?

From Up Top Looks a Little Different...

Why service agreements?

Further Investigation...

Most frequently used maintenance agreements:

PREVENTATIVE
MANDATORY
AGREEMENT
(PMA)

Let Radio Holland take
the strain and keep your
NavCom running smoothly.

MANAGED
SERVICE
AGREEMENT
(MSA)

Enjoy cost savings
and reduce equipment
breakdowns with the
support of our expert team.

Our PMA agreements, your benefit

Preventive Mandatory Agreement

Why choose PMA

- ✓ We will de-risk your Nav-Com related requirements
- ✓ Fully compliant to SOLAS chapter IV Reg.15 and Port State
- ✓ Increase employability, availability and reliability of equipment and vessel
- ✓ Increased asset / equipment uptime reducing unscheduled maintenance and unexpected costs
- ✓ Benefit from our priority service

Our MSA agreements, your benefit

Managed Service Agreement

Why choose MSA

- ✓ Build on additional benefits of PMA
- ✓ Remove the hassle of managing multiple suppliers by outsourcing all work to our experts
- ✓ Reduce unplanned maintenance & breakdowns
- ✓ Increase employability, availability and reliability of equipment and vessel
- ✓ Start cost saving now with extensive fleet, vessel and equipment reporting
- ✓ Comply with regulations and radio maintenance guidelines for Shore-Based Maintenance contracts
- ✓ Prolong certificates and equipment obsolescence management

Our SRA agreements, your benefit

Service Rate Agreement

Why choose SRA

- ✓ Our globally agreed rates make your life easy and projectable:
- ✓ Manage your service and maintenance with pre-set rates globally
- ✓ Reduce operational costs and the overall cost of ownership
- ✓ Reduce administration of purchase orders and invoices
- ✓ No unexpected costs - simple rates agreed in advance

Global vessel service database

Radio Holland Global vessel service database (GSS) Radio Holland Supportal

GSS is a data bases containing all relevant vessel, equipment & service data used for worldwide service processing but also **enabling cost of ownership analysis**

Reporting on KPI's

General Review of Requested Period (Based on Closed Calls)

Period	# Vessels Under Contract	# Calls	Calls Average per vessel	Successful Average
2015-Q1	23	86	3,7	91,9%
2015-Q2	23	63	2,7	95,2%
2015-Q3	23	74	3,2	89,2%
2015 Q4	23	52	2,3	92,3%
Requested Period	23	275	12,0	92,0%

Maintenance: Preventive vs Corrective (Based on Closed Calls, for Projected Period)

General Service Call Review subdivided by Outcome (Based on Closed Calls, for Projected Period on All Vessels)

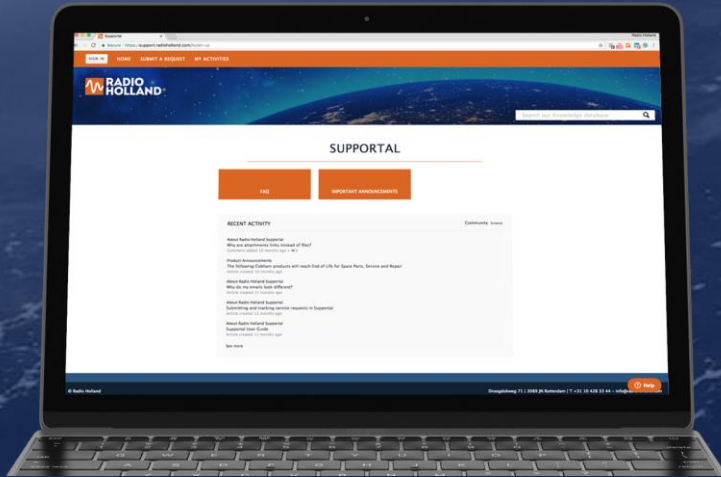

Calls: Preventive/Corrective

Online Portal

How we manage your services:

RH-Supportal, your access to:

- **Unique product knowledge**
- **Prioritized global service access**
- **“Real time” reporting on your service agreements**
- **Regulatory compliance**
- **Analytics and planning tool for equipment, services & lifecycle based on 20 years of manufacturer and service data history**

Remote Monitoring & Support

- **What is Internet of Things?**
- **Suitable data sources on board vessels**
- **Remote Monitoring & Remote Support**

Internet of Things

- Infrastructure of machines, sensors and human interfaces to communicate and interact
- First vision in 1990's, today fully integrated in our daily life
- IoT ≠ Everything needs to be in the Internet
- Used to share sensor data with related system parts / components
- Used to collect big data

What data is suitable for remote?

-  **Automation / Engine / Generator Data**
-  **Cargo Data (e.g. Reefer, Crane or Tank conditions)**
-  **Nautical sensor & Weather data**
-  **Communication / VSAT**
-  **Safety Equipment**
-  **ICT on board**
-  **Ballast Water, Trim & BWTS**

How to collect the suitable data?

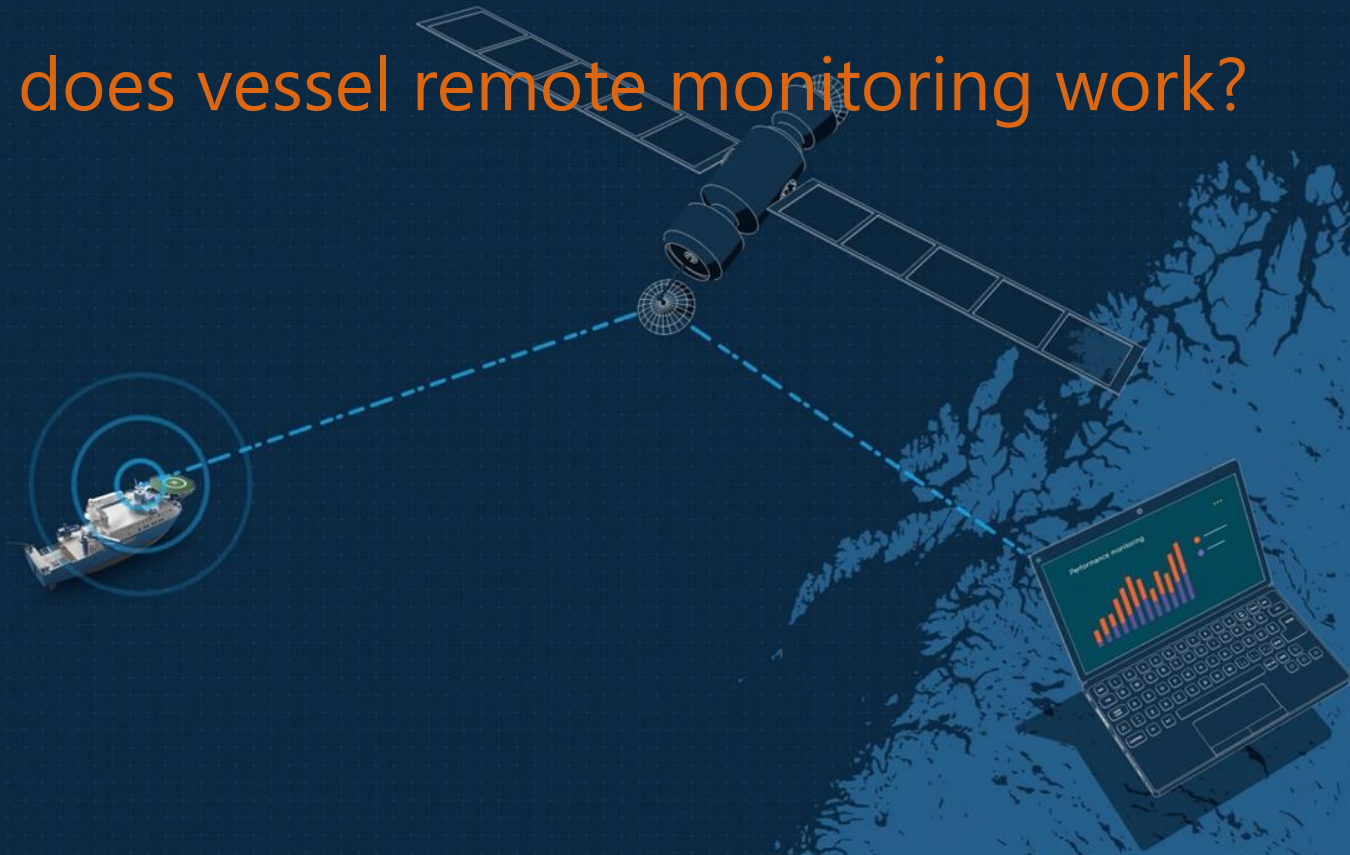

- Existing infrastructure on-board vessel by separating traffic with VLAN's
- Easy extension of infrastructure via Ethernet & ADSL
- Data collection direct by IoT sensor source or from Data Collection Units (e.g. Voyage Data Recorder)
- Connection to crucial systems e.g. Cargo Operation System , Crane Control System with a gateway solution

Is old equipment compatible?

- Data interfaces (e.g. Ethernet converter)
- Data interpreter for many types of data are available
 - Modbus
 - CAN-Bus
 - NMEA
- Free scalable as per your demands

How does vessel remote monitoring work?

1. Collect

- **IoT infrastructure on-board vessel by vessel remote server unit**
- **Data collection from source (e.g. VDR or cargo operation systems)**
- **Collection interpreter / data converter norming data**

Nav. Sensors

Radar / ECDIS

Weather

Fire Alarms

Fire- / WT- doors

Hull openings

VDR as data

collector

Engine &

Automation data

Steering

Thruster

Cargo condition

Tank- & Ballast

trim conditions

2. Selection

- The remote server unit collects the data via network. Nomination as per configuration can be modified remotely.
- “Unlimited” sample points are possible from software.

3. Pre-Processing

- Data is pre-processed on board in the Vessel Remote Server unit (VRS) to data reports.
- Each data transfer => 25 KB in order to establish a secure connection.
- Each data channel tag with 5 minute sampling => 3 KB per 24 hour sampling in compressed format.
- Example: 200 data channel tags transferred 2 times per day

$$= 200 \times 3 \text{ KB} + 2 \times 25 \text{ KB} = \underline{\underline{650 \text{ KB}}}$$

4. Transfer to shore

- The Vessel Remote Servers (VRS) is connected to the ship's communication network (VSAT; Fleet Broadband, etc.) and reports are transferred at fixed intervals (user defined) or manually.

FBB

VSAT / FX

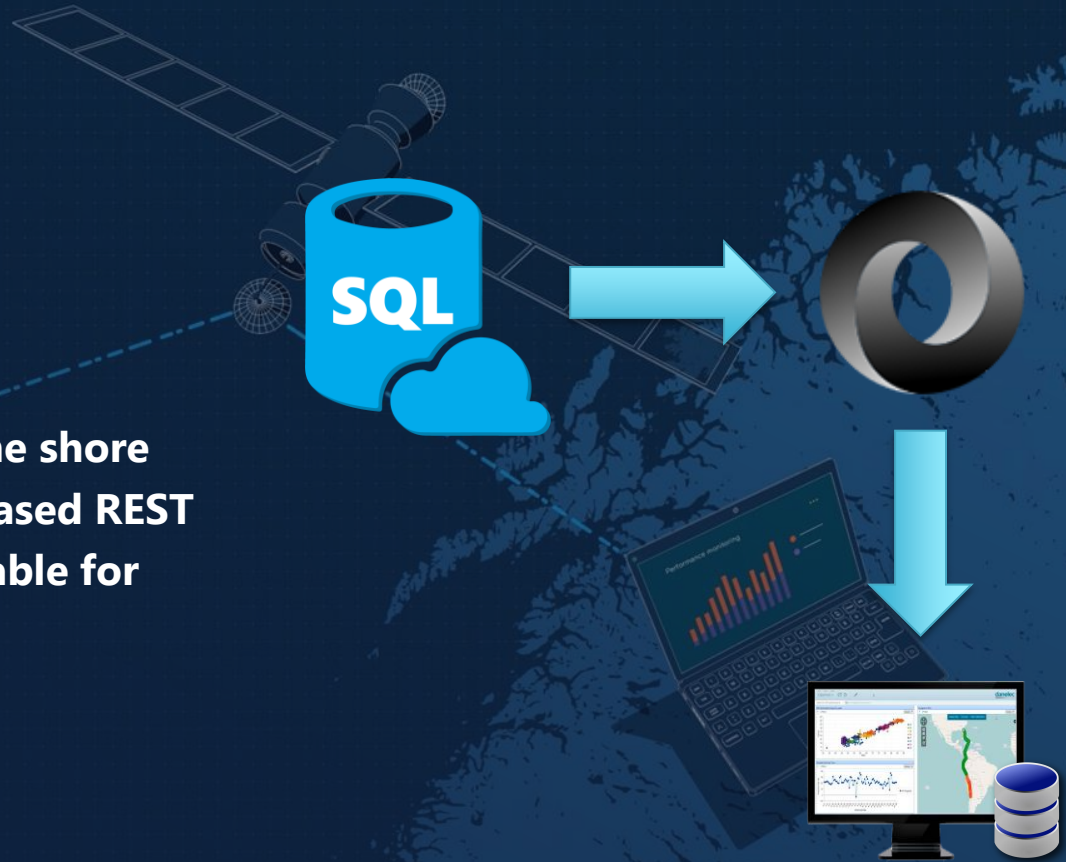

5. Shore database

- **Data reports can be stored on any server either in plain data or in a database in SQL-format**
- **Cloud-based storage with data quality check on receipt possible**

6. Extraction

- Data is extracted from the shore data server via an API (based REST JSON) and is made available for analytic software

7. Analytics

- Data can be analysed either by own applications or third party applications or companies.

What are the benefits of Remote Monitoring?

- Reducing cost of operation by early identification of issues and planned preventive maintenance
- Long-term analysis of collected data
- Anytime status and condition of systems on board

Remote Support?

- How many times do you have a navigational alert on your systems?
- How many times are these alerts critical?
- How much time is spent on board for these alerts?
- How much time are you spending to identify the reason?

Remote Support!

- **Faster response time on spot service**
- **Lower cost of ownership, lower maintenance cost**
- **Increasing uptime of crucial equipment**

The future of service business

Remote Support with Radio Holland!

RH Remote Support Box

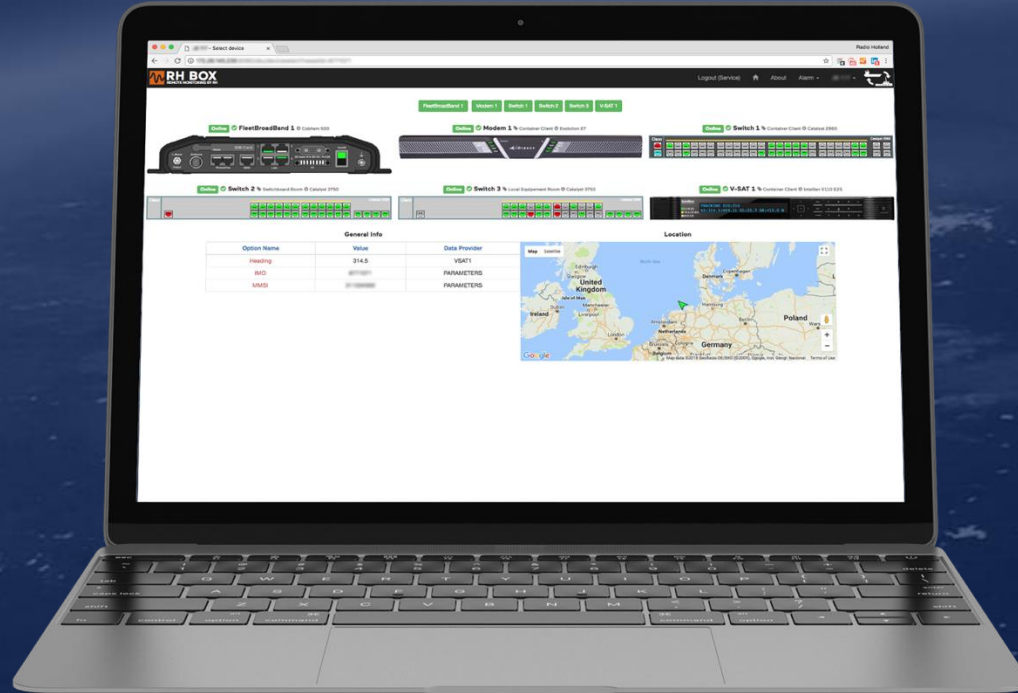

Systems we already cover for Remote Support

-  **Natical Equipment (e.g. Radar, ECDIS)**
-  **GMDSS / SatCom**
-  **Voyage Data Recorder Systems**
-  **ICT on board (e.g. Servers)**
-  **Ballast Water Treatment Systems**

Remote Monitoring & Support:

What are your worries?

Summary

SMART SOLUTIONS

RADIO HOLLAND SERVICE AGREEMENTS

- **Predict your costs**
- **Reduce your admin**
- **Streamline operations**
- **Know that your crew and vessel is safe and compliant**
- **Reduce your total cost of ownership**

SMART SOLUTIONS

RADIO HOLLAND SERVICE AGREEMENTS

Managed Service Agreement

Fully outsource your NavCom Equipment maintenance to our experts

Preventive Mandatory Agreement

Keeps your vessel's NavCom compliant at all times

Service Rate Agreement

Manage your service and maintenance costs with pre-agreed global rates

SMART SOLUTIONS

RADIO HOLLAND remote monitoring & support

- **Big Data and transparency will be key for insurance, vetting etc.**
- **Track and trace of cargo, vessels and performance**
- **IoT had an influence in logistics and will impact shipping in future**
- **Effective Monitoring allows long term analysis and founded decisions**
- **Effective Remote Support reduces time on board and travel time**

Questions?

A large white and blue ship, likely a ferry or cargo vessel, is docked at a pier. The ship has a prominent white superstructure with various antennas and equipment. To the right of the ship is a modern building with a distinctive wavy, undulating facade made of glass and metal panels. The building has a unique, almost organic shape. The scene is set against a clear blue sky.
